# Multi-Source SAML Authentication with WebEx Overview

# User connection to WebEx via SAML

User connection to WebEx via the MEETS integration

Note that the connection from the LMS to MEETS is via LTI, which does not send over any tokens used to log in to the LMS.
MEETS communicates with WebEx via the WebEx APIs

When SSO is enabled on WebEx, the integration platform utilizes its built in IdP to authenticate with WebEx via SAML
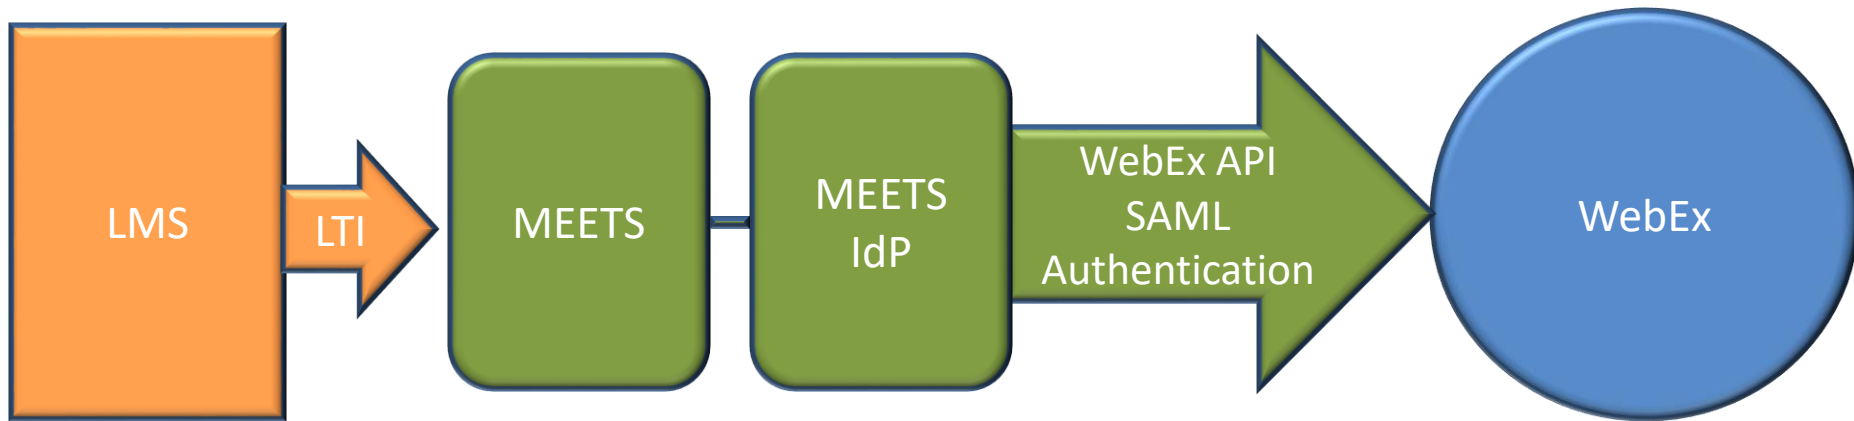

Correlating accessing WebEx directly as well as via the LMS Architecture #1: Parallel Pathways with a Shared Private Key

Architecture #2: Using CirQlive's Cir-Qonnect IdP as a Relay

Architecture #3: Using CirQlive's Cir-Qonnect IdP as the primary IdP
